Thinnr Boost and Thinnr Maintenance Stack Product info

Thinnr Boost:

Thinnr Boost is designed to be taken as a supportive measure to assist patients looking to lose weight regardless of the method or program they are using. The patient can be using GLP-based programs or any other program such as Keto, Mediterranean, Carnivore, Exercise and a clean diet, etc. Thinnr Boost can be recommended to a semaglutide non-responder as a first action before trying Tirzepatide.

Thinnr Boost is meant to be used in conjunction with any other medical weight loss program, such as the GLPs. Thinnr Boost could also be used in conjunction with Semaglutide and Tirzepatide to support liver detoxification, protect muscles, and reduce GI symptoms.

Thinnr Boost is registered with the FDA as an OTC medicine to help balance hormones and regulate cortisol., reduce gastritis and GI symptoms, provide detoxification benefits of the toxins released during fat loss via the excretory system, stimulate lipolysis, improve endurance, provide muscle protection, and boost metabolism.

Thinnr Boost is taken sublingually (under the tongue) 3 times per day, and each dose is 1mL, a graduated dropper is an integral part of each Thinnr Boost bottle in order to take the guesswork out of dosing.

Thinnr Maintenance Stack

The Thinnr Maintenance Stack is designed to support metabolic health, liver detoxification, and appetite control. This powerful trio combines science-backed ingredients to aid in maintaining healthy blood sugar levels, liver function, and metabolism, including natural support for GLP-1 production.*

Each “Stack” is designed to be a 1-month supply. The patient will simply take 2 capsules of each supplement daily.

The Thinnr Maintenance Stack is designed to be an evergreen product that the office can sell to patients on a monthly basis and even on a subscription model and is designed to be a 1-month supply. This gives practice selling the Thinnr Maintenance Stack an amazing source for substantial ongoing monthly revenue.

It includes a 1 month supply of Thinnr Control, Thinnr Detox, and Thinnr Regulate.

Here's what each supplement brings to the table:

Thinnr Regulate

Formulated with Berberine, Bitter Melon, and Banaba Leaf, this supplement targets healthy blood glucose regulation and insulin sensitivity. Berberine activates fat metabolism, enhances insulin response, and naturally promotes GLP-1 secretion, which plays a role in appetite suppression. Bitter Melon also supports appetite control, gut health, and GLP-1 secretion. Banaba Leaf, with its insulin-mimicking properties, helps stabilize blood sugar levels and minimize cravings, creating a synergistic effect for sustained weight control.*

Thinnr Detox

Featuring Solarplast®, Artichoke Leaf, Dandelion Leaf, and Milk Thistle, this liver detox blend promotes detoxification and efficient digestion. Solarplast® supports cellular energy, while Artichoke Leaf enhances fat digestion. Dandelion Leaf acts as a natural diuretic, and Milk Thistle protects liver health. Together, these ingredients help optimize liver function and reduce oxidative stress, essential for sustained weight maintenance.*

Thinnr Control

This supplement combines African Mango, Raspberry Ketone, Green Coffee Bean, and Green Tea to regulate appetite, support fat metabolism, and boost energy levels. African Mango aids in appetite suppression, Raspberry Ketone enhances fat breakdown, Green Coffee Bean supports glucose balance, and Green Tea boosts thermogenesis. These ingredients work together to support metabolic health and long-term weight management.*

SlimCell Weight Maintenance Stack provides a complete approach to help patients maintain their weight effectively while supporting key areas of metabolic and liver health, naturally encouraging healthy GLP-1 levels for improved weight control and appetite regulation.
