Thinnr™ - The 2 Pillar Approach to Weight Loss & Weight Maintenance

The Thinnr Weight Loss Program pillars are the Thinnr Homeopathic Medication and the Thinnr Weight Loss & Weight Maintenance Nutrition Strategy.

The Thinner homeopathic medication is an all-natural, FDA-registered homeopathic OTC medicine that supports healthy weight loss, a balanced metabolism, lower stress levels, reduced hunger and cravings, detoxification, and improved elimination as part of a comprehensive weight management plan. The Thinnr Weight Loss & Weight Maintenance Nutrition Strategy is a science-backed nutrition approach emphasizing specific portions and combinations of low glycemic index and anti-inflammatory foods. This holistic combination promotes sustainable weight loss, reduces inflammation, and supports overall health, making it an ideal solution for long-term weight management and well-being.

The Thinnr program is clinically shown to achieve significant weight loss faster and at a lower cost than GLP-1s. As an added benefit, with Thinnr, there are no prescription drugs, no giving yourself injections, no strenuous exercise, no shakes, and no expensive prepackaged foods.

The 4 Phases Of The Thinnr Weight Loss Program

The Thinnr program is divided into 4 phases: the Metabolic Activation Phase, the Metabolic Thinning Phase, the Metabolic Transition Phase, and the Metabolic Normalization Phase. Each phase is discussed later in this book.

Taking the Thinnr Homeopathic Formulation
The Thinnr formula is administered sublingually (under the tongue) for maximum absorption. Before taking it, giving the bottle a quick shake is important.

You will start taking the formulation three times a day from days 1-39. You will take 1mL three times per day. On days 40-42, you won't take the Thinnr medicine.

Try to space the doses about 7 hours apart. A suggested schedule is 8 a.m., 3 p.m., and 10 p.m., but if those times don't work for you, choose times that fit your schedule. Just make sure the doses are as evenly spaced as possible, around 7 hours apart.

Avoid eating or drinking for 5 minutes before and after taking the formulation.

It's important that you do not skip doses. Missing doses may leave you feeling hungry, may cause your blood sugar to fluctuate, and can potentially slow your metabolism. If you miss a dose, please take it as soon as possible.

Exercise During The Thinnr Weight Loss Program
While you are participating in the Thinnr Weight Loss Program, exercise is not required, however, all Zone 1 and Zone 2 exercises are allowed. These include activities such as light to moderated walking for 20 minutes and light yoga.

Because exercise is important for weight maintenance and overall health, it is recommended that you either resume your previous exercise routine of start doing Zone 2 and Zone 3 exercise.

The Thinnr Weight Loss Program™

METABOLIC ACTIVATION PHASE (Day 1 and Day 2)
Drop Dosage: 1mL, 3 times per day

The goal of the Metabolic Activation Phase is to stimulate and maintain dietary thermogenesis while the Thinnr homeopathic medicine takes effect in your body. When you transition into the Metabolic Thinning phase, this will help you burn more calories on a daily basis.

During this phase, you should consume at least 4,000 calories per day. It is recommended that you set a target of 70% of your intake be higher fat protein. If you have a history of gallbladder issues or have had your gallbladder removed, consult with your healthcare provider before starting the Metabolic Activation Phase.

It is critical that you "graze" throughout the day rather than sticking to just two or three meals. Continuous eating is essential, as trying to load with only three meals may result in slower weight loss during the next phase.

You will start drinking 80-100 ounces of water per day. It is important that you spread your water consumption across the day.

What to Expect During the Metabolic Activation Phase

On days 1 and 2, it's completely normal to experience a slight weight gain.

For many people, the Metabolic Activation Phase is one of the most enjoyable parts of the program, aside from seeing the pounds melt away later.

METABOLIC THINNING PHASE (Day 3 - Day 39)
Drop Dosage: 1mL, 3 times per day

Exercise: Limit exercise to no more than 20 minutes of light to moderate intensity walking or 20 minutes of light yoga.

During the Metabolic Thinning phase, you will continue taking 1mL of the Thinnr homeopathic formulation dose 3 times per day and follow the recommended time spacing between doses.

You will also start following the Thinnr Weight Loss & Weight Maintenance Nutrition Strategy, a specific and balanced combination of low-glycemic and anti-inflammatory foods, which is covered in detail below. It is vital that you stick to the prescribed portion sizes—no skipping meals or shifting foods around.

Continue to drink at least 80-100 ounces of water daily, as instructed above.

It is common for a person to lose 1-3 pounds per day for the first few days as the body begins flushing itself ofsystemic inflammation. On or around day 5, your weight loss will likely slow (depending on how much inflammation is in your body). Moving forward, your weight loss will

typically average 0.25 to 0.75 pounds per day. Some individuals may find that their weight loss stalls for 1-2 days. If this happens, continue with the Metabolic Thinning phase as instructed. If your weight loss has stalled for more than 72 hours, please notify your Thinnr healthcare provider and they may make additional recommendations to break your stall.

Metabolic Thinning Phase Nutrition Strategy And Meal Instructions

See The Nutrition Strategy Approved Selections At The Back Of This Book

In addition to the specific and balanced combination of low-glycemic and anti-inflammatory foods, the Thinnr weight loss program utilizes the concepts of intermittent fasting. This means you will eat 2 times per day, and your goal is to eat both meals within a 6 to 7-hour window of time. For example, if you eat your first meal at noon, you will want to ensure you have eaten your second meal by 7:00 PM. We recommend that you eat lunch and dinner so that a large portion of your intermittent fasting is while you sleep. You can still enjoy coffee, water, iced tea, or diet soda, but no added sugar or fats. If you need cream for your coffee, opt for a non-fat, calorie-free version and a sweetener with Stevia instead of sugar. If a food is not on the “approved list”, it is not allowed UNLESS is it specifically called for in a Thinnr-approved recipe.

It is important to vary and rotate your protein, vegetable, and fruit selections for each meal. Basically, avoid eating the same food multiple meals in a row, meaning don’t eat chicken as your protein selection for more than 2 consecutive meals.

To make this easy to understand, we will assume that your first meal will be lunch and your second meal will be dinner. We will also assume that Your first meal will be eaten at noon and your 2nd meal will be consumed at 6:00 PM.

Breakfast:
No food. Drink coffee, tea, or water. Use no-calorie cream substitutes and/or no-calorie flavorings if you choose. We recommend using Stevia as an alternative to sugar, as adding sugar to your drinks is prohibited.

Lunch:
Protein: 5-6 oz. of Thinnr Nutrition Strategy-approved lean protein
Vegetables: 5-6 oz. of Thinnr Nutrition Strategy-approved vegetables
Fruit: 5-6 oz. of Thinnr Nutrition Strategy-approved fresh fruit
Bread (optional): Thinnr Nutrition Strategy-approved grain

Dinner: (Recommended to eat different items than consumed at lunch)
Protein: 5-6 oz. of Thinnr Nutrition Strategy-approved lean protein
Vegetables: 5-6 oz. of Thinnr Nutrition Strategy-approved vegetables
Fruit: 5-6 oz. of Thinnr Nutrition Strategy-approved fresh fruit
Bread (optional): Thinnr Nutrition Strategy-approved grain

Vegetarian And Vegan Guidelines

Thanks to the wide variety of high-quality vegetarian and vegan products now available, the Thinnr Weight Loss Program is no longer considered difficult for those following plant-based diets.

Below are the specific guidelines for vegetarians and vegans participating in the Thinnr Weight Loss Program. Due to the unique nature of plant-based diets, certain recommendations will differ from the standard Thinnr plan.

When incorporating a meat substitute, the serving size should be limited to 5-6 ounces. Since many plant-based meat alternatives contain more fat than what is typically allowed during the Thinnr Metabolic Thinning Phase, it is important to limit these to one meal per day. The other meal should be lower in fat to balance the intake.

There is no need to measure your vegetable portions for meals that do not include meat substitutes. Eat enough low-starch vegetables to feel satisfied—no weighing necessary. Free vegetables, as listed in the program, are great options for helping you feel full.

- Meal preparation is essential! Prepare soups and multi-serving meals beforehand, and freeze them in portion-sized containers for convenience.
- When using vegetarian or vegan meat alternatives, stick to the 5-6 ounce serving size recommended for the Thinnr Metabolic Thinning Phase.
- Because meat alternatives are generally higher in fat, limit them to one meal a day, making sure the other meal is low in fat.
- Avoid starchy vegetables like corn, peas, and potatoes.

Approved vegetarian and vegan products that can replace the protein options listed in the Thinnr recipes include:

- Vegetarian chicken alternatives
- Vegetarian beef alternatives
- Vegetarian pork alternatives
- Vegetarian sausage and hotdog alternatives
- Tofu and tempeh
- Edamame (limit to 1-2 times per week)
- Vegetarian/vegan broths
- Skim milk
- Cottage cheese
- Unsweetened yogurt
- If you regularly eat eggs, egg whites or egg substitutes are an excellent source of protein.

METABOLIC TRANSITION PHASE (Day 40 – Day 42)
Drop Dosage: No Thinnr formulation

Continue following the Thinnr Metabolic Phase nutrition strategy.

METABOLIC NORMALIZATION PHASE (Day 43 and Beyond)
The Thinnr Metabolic Normalization Phase distinguishes the Thinnr Weight Loss Program from other programs. It provides easy-to-follow guidelines to help ensure successful long-term weight loss.

Copyright © 2025 SlimCell

Those who adhere to the Thinnr Metabolic Normalization Phase guidelines will experience more sustained weight loss. This happens because you've adjusted your behavioral and eating habits and achieved a new BMI and BMR.

Additionally, we recommend that you start the Thinnr Weight Loss Maintenance Support Pack which is designed to help sustain your weight loss results.

If you have not reached your weight loss goal during the previous Thinnr phases, follow the Thinnr Metabolic Normalization Phase instructions for at least 28 days before starting your next Thinnr cycle.

Additionally, if you choose to discontinue the intermittent fasting component, you can resume eating breakfast. We recommend setting a target of 300-400 calories composed of a combination of lean protein and/or eggs and fruit from the Nutrition Strategy Approved Selections and plant-based healthy fats like avocado.

Metabolic Normalization Phase Nutrition Strategy And Meal Instructions

See The Nutrition Strategy Approved Selections At The Back Of This Book

All food selections should continue to be selected from the Nutrition Strategy Approved Selections at the back of this book.

During the Thinnr Metabolic Normalization Phase, you will increase your caloric intake to match your Basal Metabolic Rate (BMR), which is the number of calories you burn at rest. Additionally, we recommend that you start or resume an exercise routine. When you do this, you should also increase your daily caloric intake by adding 0.5 ounces of lean protein for every 100 calories you burn with the exercise. A high-quality 0-carb protein powder is also acceptable if it is high quality and comes from a clean source.

Breakfast (Optional):
300-400 calories composed of a combination of lean protein and/or eggs and fruit from the Nutrition Strategy. Approved Selections and plant-based healthy fats like avocado.

Lunch:
Protein: 7-8 oz. of Thinnr Nutrition Strategy-approved lean protein
Vegetables: 7-8 oz. of Thinnr Nutrition Strategy-approved vegetables
Fruit: 7-8 oz. of Thinnr Nutrition Strategy-approved fresh fruit
Bread (optional): Thinnr Nutrition Strategy-approved grain

Dinner: (Recommended to eat different items than consumed at lunch)
Protein: 7-8 oz. of Thinnr Nutrition Strategy-approved lean protein
Vegetables: 7-8 oz. of Thinnr Nutrition Strategy-approved vegetables
Fruit: 7-8 oz. of Thinnr Nutrition Strategy-approved fresh fruit
Bread (optional): Thinnr Nutrition Strategy-approved grain

THINNR-NUTRITION STRATEGY APPROVED SELECTIONS

Thinnr-Approved Protein Selections (Must Be Consumed At Each Meal)

Please remember that the amount allowed during the metabolic thinning phase is 5-6 oz. If you are eating lunchmeat, it needs to be 93/7 or leaner or marked as “Heart Healthy.”

Protein Hints: when buying lean (93/7 or leaner or marked as “Heart Healthy) lunch meat, go to the deli counter and have the clerk package it in 5-6 ounce servings. When buying steak or any other protein, ask the butcher to cut it into 5-6 ounce portions and package them separately.

You can marinate meats. Place meat in marinade for 8-24 hours before cooking and refrigerate.

Before cooking, rinse the meat under hot water to remove the sugar and fat from the marinade while allowing the flavor that has penetrated the meat to remain.

Feel free to add various seasonings or sauces if they are 0-calorie.

Please remember that the amount allowed during the Metabolic Thinning phase is 5-6 ounces. All protein should be 93% FAT-FREE!
